

LANDSTAR Field

KEY FEATURES

- **INTUITIVE**
Icon driven menu and graphical interface
- **INTEROPERABILITY**
Choice from several data controller platform to fit your needs
- **EXTENDED FUNCTIONS**
Data collection, stakeout, basic COGO functions, user defined datum and site calibration
- **VERSATILE**
Ideal for traditional survey and GIS / mapping applications

CHC Landstar Field software is the data collection solution for everyday survey work. Compatible with various data controller platform and available in multiple languages, the Landstar software is the ideal complement to CHC X91, X90 and X60 GPS/GNSS series.

CHC Landstar gives user full control over data collection and stakeout, without compromising ease-of-use and high productivity.

- Survey results stored in a single job file to ensure quick and seamless data transfer.
- Enhanced algorithm to set up the base station on known point or on free station mode.
- Real time GPRS connectivity monitoring.
- Flexible pre or post site calibration to optimize productivity.
- Easy predefined and customized projections management.
- Different inputs / output formats available to match project requirements.
- Auto save mode to secure your data.
